Professional Profile

I am a Software Engineer with 4+ years of experience building and maintaining Java/Spring Boot enterprise-grade applications in a US-based insurance domain. Now I'm based in Dublin, having completed my MSc in Information Systems at UCD, working part-time at Dublin Street Parking Services. I was responsible for maintaining 99.9% system uptime, resolving 50+ critical outages with 100% resolution rate, and cutting recurring fault rates by 35%. What sets me apart is the rare discipline to own a system end-to-end under pressure, debugging what others avoid, finding the root cause of critical defects instead of patching the symptom, and making sure the same failure doesn't happen twice. I'm an exceptionally hard-working professional, and I want to bring to the Irish Tech market my expertise to solve real challenges, interpersonal skills, and technical depth, and become an integral part of the team.

Skills & Expertise

Languages & Frameworks: Java (Core + Advanced), J2EE, Spring IOC, Spring Boot, Spring MVC, REST APIs, Hibernate

Architecture Patterns: Object-Oriented Design (OOP), SOLID Principles, Design Patterns

Testing & Quality: JUnit, Mockito, Unit & Integration Testing, Test Driven Development, Behavior Driven Development

Databases: MySQL, Oracle SQL

DevOps & Tools: CI/CD Pipelines, Git, Maven, Jenkins, IntelliJ IDEA, Apache Tomcat, Postman, Sonar

Methodologies: JSON/XML, Agile (Scrum), SDLC, Code Reviews, Root Cause Analysis

Key Competencies

Production systems ownership, Test-driven development, Performance optimisation, Legacy code stabilisation, Technical leadership under pressure, Knowledge transfer, Clear written communication, Ownership mentality.

Professional Experience

Quality Control Administrator

Oct 2024 - Present

Q-Park

Dublin, Ireland

- Q-Park is one of Ireland's leading parking management companies, operating the on-street enforcement and promoting sensible parking to reduce traffic congestion.
- As Quality Control Administrator, I support the Customer Service and Operations teams by validating data accuracy, transaction auditing, and issue resolution across the business, reporting workflows, and handling thousands of customer transactions and enforcement operations across Dublin.
- Audited 4000+ monthly customer transactions through an internal CRM system, maintaining 98%+ processing accuracy, directly reducing downstream operational errors and customer escalations.
- Investigated and resolved 100+ monthly system-related issues, including payment discrepancies and account processing errors, reducing resolution turnaround by 20% through root cause analysis.
- Maintained an appeals tracker, preparing appeal packs and ensuring all case documentation met quality and compliance standards.

Software Engineer

Jul 2020 - Aug 2024

Cognizant Technology Solutions

Kolkata, India

- Cognizant Technology Solutions is a Fortune 500, global technology company with 300,000+ employees across 40+ countries. I was placed on Exigen Insurance Suite (EIS), a mission-critical enterprise SaaS product trusted by major North American insurers to run their core policy and claims operations.
- As a Software Engineer, I was responsible for owning the development and enhancement of the most business-critical Policy Core, the workflows that underwriters depended on daily to originate policies, manage mid-term endorsements, and process renewals. Errors or failures in these modules had direct, real-world consequences for enterprise insurance clients, making precision and stability non-negotiable in every delivery.
- Built and shipped Java/Spring Boot services for the EIS platform, processing 200K+ API requests per day at 99.9% uptime for 15K+ users, maintaining feature consistency and data integrity to ensure changes in one module never broke dependent underwriting workflows.
- Led the team as a first-call engineer for production incidents, resolved 20+ P1 outages at 100% resolution rate, cutting recurring fault rate by 35% through root cause analysis, not symptom patching.
- Developed 25+ triggered batch jobs using Java and Spring Batch, processing large volumes of policy data in CSV and XML formats, covering automated policy renewals, mid-term endorsements, form data updates, and bulk Oracle SQL query execution for testing workflows.
- Improved test coverage of EIS legacy modules to 92%+ with 100+ automated tests (JUnit/Mockito) from scratch and introduced TDD/BDD team-wide, reducing production defects by 30%.
- Resolved bottlenecks across service and database layers in underwriting workflows, improving response times by 25%, which smoothened the delivery timeline of releases at 98%+ via CI/CD pipelines (Jenkins, Maven, Sonar).
- Led code reviews enforcing SOLID principles and secure coding standards across the codebase. Mentored junior engineers on debugging discipline, sustaining quality across 100+ production releases.

Education

MSc. Information Systems

Sep 2024 - Sep 2025

University College Dublin

Dublin, Ireland

Relevant courses: Informatics, Data & Society, Applied Data Wrangling and Visualisation, Quantitative Data Analytics, Language Models and Methods, Interactive Dashboards; Python, Project Management, AI Ethics & Auditing, Machine Learning Foundations.

BTech. Electronics & Communication Engineering

Jul 2016 - May 2020

University of Engineering & Management

Kolkata, India

Relevant courses: Engineering Mathematics, Physics, Computer Programming, Computer Organisation & Architecture, Database Management Systems, Data Science & Data Analytics.

Academic Projects

Project Management for Bilingual History Learning App

May 2025 - Jul 2025

University College Dublin

Dublin, Ireland

- Tourists and learners visiting Ireland had no centralised, accessible digital resource connecting them to Irish history and culture in both English and Irish.
- As part of a 6-member team, contributed to a comprehensive Project Management Plan (PMP) for a government-commissioned bilingual mobile app designed to bridge that gap, covering a €1M budget, 34-week delivery schedule, risk register, and RACI stakeholder matrix across 15 stakeholders.
- Personally authored the Closure and Maintenance sections, defining incident SLAs, quality gates (GDPR, WCAG, ISO 27001), and a 90% user satisfaction acceptance threshold to ensure the product would remain reliable and compliant long after launch.

Outreach Event Management App

May 2020 - Jun 2020

Cognizant Technology Solutions

Kolkata, India

- Event managers were relying on manual, error-prone processes to handle registrations, track participants, and manage role-based access across events, making it slow, inconsistent, and difficult to scale.
- Built a full-stack event management application from scratch using Java, Spring Boot, Hibernate, MySQL, and JSP that automated the entire workflow, from participant registration and role-based access control through to real-time data logging, reducing manual effort and giving managers a single, reliable system to track and manage events for 200+ users.

Courses & Certifications

- Google Certified Data Analytics
- Google Cloud Ready Facilitator Program
- JP Morgan Chase and Co. Software Engineering Virtual Experience
- Spring Boot certified by Udemy
- Hibernate & JPA certified by Udemy
